

WEEP HOLE COVER

Installation Guide for VT-WHC-B

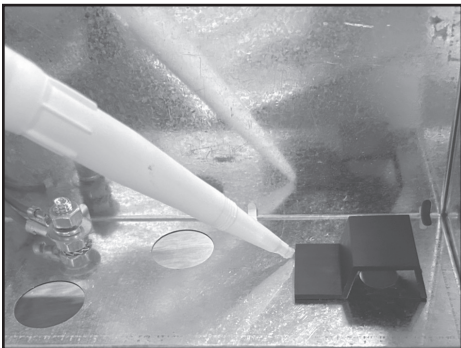

Installation

1. Prepare the Weep Hole Cover:

Locate the weep hole on the bottom of the sign. Clean the area thoroughly to ensure proper adhesion.

2. Apply the cover: Remove the adhesive liner from the Weep Hole Cover. Position the cover so the tallest section is centered directly over the hole. Firmly press down to fully seat the adhesive.

3. Long-term adhesion: Apply a small bead of silicone around the back adhesive section of the cover to help secure it and prevent it from coming loose over time.

4. Verify proper adhesion: When installed correctly, the Weep Hole Cover will continue to allow air and water to escape from the sign while the cover prevents light from passing through.
